Jonah Olsen

(209) 505-1232 | Jonaholsen13@gmail.com | linkedin.com/in/jonaholsen

Education

San Diego State University

Bachelor of Science, Mechanical Engineering - Mechanical Systems | Aztec Electric Racing Expected Graduation - May 2026

Modesto Junior College

Associate Degree, Engineering | Engineering Club President | Student-athlete Graduated May 2024

Skills

Technical Skills: MoTec, WinTAX4, OptimumLap, ChassisSim, Solidworks, Autodesk Fusion360, Additive Manufacturing, MATLAB, Shielded Metal Arc/MIG/TIG Welding, CNC Milling, CNC Lathe, Water Jet, Python, Composite Layup

Experience

ENVE Motorsports

Junior Data and Performance Engineer January 2026 - Current

- Utilize **Magneti Marelli WinTAX4** to monitor real-time vehicle health and analyze telemetry; identified performance gains by correlating driver subjective feedback with empirical data.
- Execute setup adjustments on the **Tatuus USF-22**, including corner weight and stringing to ensure compliance with developed setup sheets.
- Serve as a member of the pit crew and mechanical team, performing high-stakes repairs and setup changes under strict time constraints during race and test scenarios.
- Collaborate under the **Lead Race Engineer** to assist in run-plan development, fuel strategy, and tire management protocols for **USF2000** Championship events and **The Thermal Club** test days.

Aztec Electric Racing

Executive Vehicle Dynamicist August 2024 - Current

- Lead a multidisciplinary team of 20+ engineers, managing complex technical workflows under compressed design-build-test timelines for the AER26 and AER27 EV platforms.
- Utilized **OptimumG's OptimumLap** to correlate vehicle-level KPIs to lap time and competition points. Determined vehicle design metrics and performance targets to meet desired **FSAE EV** competition placement goals.
- Scripted a **MATLAB Pacejka4 Tire Model** to characterize **25** different tire size and compound combinations, comparing graphs and data in order to determine the ideal tire for the design of AER26 and AER27.
- Develop **testing procedures** and process results of AER25 and AER26 through manual data collection and **MoTec i2** software to validate design choices, correlate vehicle simulations, and define key vehicle strengths and weaknesses.
- Serving as the **Primary Driver** for Autocross and Endurance events; leverage dual-perspective as an engineer/driver to tune AER25's performance/handling/stability characteristics through mechanical, aerodynamic, and powertrain parameters using both empirical data and subjective feedback.

San Diego Region SCCA Solo

Competitor / Volunteer August 2024 - Current

- Volunteer as a **Safety Steward** and **Course Designer**, ensuring event compliance with SCCA safety regulations and designing car-neutral courses that challenge advanced drivers and allow novice drivers to develop their skills in a safe environment.
- Serve as a **Novice Instructor**, translating vehicle dynamics concepts into actionable coaching for entry-level drivers to improve their car control and line choice.
- Secured **3rd Place Overall** in the 2025 SCCA SDR BST Season; performing all vehicle setup, including alignment and mechanical grip adjustments.
- Conducted "ride-alongs" in multiple championship-winning chassis to benchmark handling characteristics against my own vehicle development and driving style.
